

Multiple choice question (MCQ)

Empyema:

1-Empyema is.....

- A- Pus in the pleural space
- B- Serous fluid in the pleural space
- C- Air in the pleural space
- D- Blood in the pleural space

2-Stages of empyema are.....

- A-Primary and secondary
- B- Exudative, fibropurulent and organized
- C-Empyema has no stages
- D-Spontaneous and acquired

3-Empyema fluid are.....

- A-Transudate
- B-Exudate
- C- Serosanguinous
- D-Serous

4-Management of empyema include.....

- A-Observation
- B-Drainage
- C-Oxygen therapy
- D-Bronchodilator

5-Surgery for empyema include.....

- A-Decortication
- B-Thoracocentesis
- C-Bullectomy
- D-Pneumonectomy

Pneumothorax:

1-Pneumothorax is.....

- A-Blood in the pleural space
- B- Air in the pleural space
- C- Blood and air in the pleural space
- D-Pus in the pleural space

2- Types of pneumothorax are.....

- A-Early and late
- B- Spontaneous and acquired
- C-Acute and chronic
- D-Congenital and acquired

3- Traumatic pneumothorax are.....

- A-Open and closed

- B- Primary and secondary
- C- Spontaneous and acquired
- D-Unilateral and bilateral

4- Spontaneous pneumothorax are

A- Primary and secondary

- B- Acute and chronic
- C- Small and severe
- D-Early and late

5-Surgery for pneumothorax include.....

A-Thoracotomy tube

- B-VATS surgery
- C-Bullectomy
- D-Lobectomy

6-Bilateral pneumothorax managed by.....

- A-Thoracocentesis
- B-Observation
- C-Thoracotomy exploration**
- D-Pleurodesis

Bronchiectasis:

1- Bronchiectasis is.....

- A-Obstruction of the bronchi
- B- Dilatation of the bronchi**
- C- Normal patent bronchi
- D- Normal wide bronchi

2- Bronchiectasis are.....

- A-Early and late
- B- Acute and chronic
- C- Localized and diffuse**
- D-Congenital and acquired

3- Bronchiectasis is.....

- A-Reversible and irreversible
- B- Primary and secondary
- C- Cylindrical and secular**
- D-Thoracic and extra thoracic

4- Bronchiectasis is

- A- Congenital and acquired**
- B- Traumatic and spontaneous
- C- Open and closed
- D-Permeant and nonpermanent

5- Bronchiectasis is

- A- Wet and dry**
- B-Infectious and non-infection

C-Suppurative and non-suppurative
D-Metastatic and non-metastatic

6- Bronchiectasis is characterized by.....

A-Nonproductive cough

B- Productive cough

C-Heamoptisis

D-No cough

7- Bronchiectasis is complicated by.....

A-Renal failure

B- Respiratory and heart failure

C-Sudden death

D-Liver failure

8- Universal Bronchiectasis is best managed by.....

A-Heart lung transplant

B- Physiotherapy

C-Medical treatment

D-Pleurodesis

Lung abscess:

1-Lung abscess is.....

A-Acute and chronic

B- Localized and diffuse

C- Suppurative and non-suppurative

D- Congenital and acquired

2- Lung abscess is

A-Non cavitary lung disease

B- Cavitary lung disease

C- Congenital

D- Acquired

3- Lung abscess is

A-Open and closed

B- Suppurative and non-suppurative

C- Localized and diffuse

D-Spontaneous and acquired

4- The common lobe for aspiration are

A- The right middle lobe

B- The right lower lobe

C- The left upper lobe

D-The left lower lobe

5- The clinical picture of Lung abscess include.....

A-Offensive sputum

B-Acute chest pain

C-Morbid obesity

D-Normal body temperature

6- Lung abscess is diagnosed by.....

A-Thoracoscope

B-Bronchoscope

C-Mediastinoscopy

D-Oesophagoscope

7- Differential diagnosis of Lung abscess include

A-Bronchiectasis

B-Bronchiolitis

C-Bronchial asthma

D-Bronchitis

8-Management of Lung abscess include

A-Pleurodesis

B-Posture drainage

C-Thoracotomy tube

D-Thoracocentesis

9-Surgery for Lung abscess are

A-Frequently performed

B-Have no role

C-Less Frequently performed

D-The first line of treatment

Bronchogenic carcinoma:

1- Bronchogenic carcinoma is.....

A-Small and Non-small cell

B- Acute and chronic

C- Early and late

D- Localized and diffuse

2- Non small cell lung cancer include

A-Metastatic

B- Adenocarcinoma cell and oat cell

C- Adenocarcinoma cell and squamous cell

D- Non-metastatic

3- Small cell lung cancer are.....

A-Mainly central

B- Mainly peripheral

C- Equally distributed

D-Not central nor peripheral

4- Early stage f Lung cancer at chest x ray showing.....

A- Widening of the mediastinum

B- Solitary pulmonary nodule

C- Pleural effusion

D- Bilateral pulmonary nodule

5- Early stage of Lung cancer is diagnosed by

A-Transbronchial needle biopsy

B- Transthoracic needle biopsy

C- Transesophageal needle biopsy

D-Thoracocentesis

6-Staggening of Lung cancer are.....

A-Clinical and surgical

B- Primary and secondary

C-Metastatic and non-metastatic

D-Reversible and irreversible

7-Small cell of Lung cancer are.....

A-Limited and extensive

B- Reversible and non-irreversible

C-Early and late

D-Primary and secondary

8-TNM staggering of Lung cancer are based on

A-Clinical presentation

B- Size of the tumor

C-Technique of diagnosis

D-Radiological finding

9-Surgery for stage IV Lung cancer are

A-Operable

B- Non-Operable

C-According to the type

D-According to the size

Mediastinal mass:

1- Mediastinal division are

A-Medial and lateral

B- Central and peripheral

C- Superior and inferior

D-Right and left

2- The anterior Mediastinal contain.....

A-The heart

B- Trachea

C- Thymus gland

D-Thoracic duct

3- The middle mediastinal is bounded by

A-The pericardium

B- Paravertebral gutter

C- The trachea and esophagus

D-The pleura

4- The posterior Mediastinal contain

A- Azygous vein

B-Trachea

C- Thymus gland

D-The heart

5- Anterior Mediastinal mass include.....

A-Germ cell tumor

B-Hiatus hernia

C-Neurogenic tumor

D-Pneumopericardium cyst

6- The middle mediastinal mass include

A-Neurenteric cysts

B-Bronchogenic cysts

C- Thymoma

D-Thyroid goiter

7- The posterior mediastinal mass include

A-Tracheal tumor

B-Hiatus hernia

C- Thymic hyperplasia

D-Parathyroid tumor

8- The presentation of mediastinal mass depends on

A-The position of the mass only

B- The size of the mass only

C- The age of the patient only

D-The size and position of the mass according to the age of the patient
