

Q-Type of phosphodiesterase enzyme inhibitors used in respiratory diseases with example?

DE-4 inhibitors: roflumilast

-PDE-5 inhibitors: sildenafil

-Non-specific PDE inhibitors: theophylline

Q- Adverse effects of sildenafil?

short duration and dose related

1. Headach
2. Flushing
3. Nasal congestion
4. Dyspepsia
5. Large dose inhibit PDE6 needed for phototransduction which cause blue vision, blurred vision , visual field contraction

Q- Adverse effects of Roflumilast?

1. Gut... nausea,vomiting, diarrhea, anorexia,pain
2. Adipose tissue .. weight loss
3. Insomnia, headach

Q-Drug interaction with theophylline

1. Drugs inhibit its metabolism toxicity a. Cimitidin b. Erythrobionin &quinololene c. Hypothyroidism , hepatic disease
2. Drugs accelerate its metabolism... decrease its efficacy.. a. Tomato, alcohol b. Antiepileptics :phenobarbital... c . Rifambicin d. Hyperthyroidism

Q-Adverse effects of theophylline

1. narrow safety margin
2. Irritant drug : gastritis if taken orally proctatitis if rectally
3. Fast iv administration cause velocity reaction ... tachycardia, arrytmia ,arrest, hypotention, syncope
