

Blood supply of the lung

Essay

1. How many bronchial arteries are there?

On the left side: Two arteries

On the right side: Single artery

2. Where do the bronchial arteries arise and what do they supply?

On the left side: from descending aorta

On the right side: from superior left bronchial artery

They supply bronchi, stroma of the lung, and the visceral pleura

3. Enumerate the pulmonary veins and what does it carry?

Superior pulmonary vein.

Inferior pulmonary vein.

They are two in each side carrying oxygenated blood from the lung.

4. Which arteries carry deoxygenated blood to the lung?

Right pulmonary artery: lies anterior and in between ep-arterial and hyp-arterial bronchi.

Left pulmonary artery: lies antero-superior to the left main bronchus.

MCQ

1. Blood pressure in the pulmonary artery is _____.
a) Same as that in the aorta
b) Less than that in venae cavae
c) More than that in the carotid
d) More than that in the pulmonary vein.

ANSWER: (d)

2. Pulmonary veins differ from other veins in that they:
a) Carry blood away from the heart
b) Carry deoxygenated blood
c) Carry oxygenated blood
d) Have cartilaginous walls

ANSWER: (c)

3. What blood vessel carries deoxygenated blood from the heart to the lungs?
a) Pulmonary vein
b) Aorta
c) Pulmonary artery
d) Vena cava

ANSWER: (c)
